WORK EXPERIENCE

Software Engineer

Cartrawler

📅 May 2019 - June 2022

📍 Dublin

- Created and maintained car rental landing-pages for the world's largest airlines and travel companies.
- Developed a fully responsive template variant of our Smart Block Cross Sell product using React with 100% test coverage using Jest.
- Key engineer in migrating scalable components used on the microsites product from the play framework into React.
- Built fully tested enterprise solutions within a monorepo.
- Played a principal role in delivering a fully tested inhouse solution to a salesforce manage booking application.
- Aided in the onboarding of multiple new engineers as well as mentoring a junior engineer.
- Received multiple recognition awards for collaboration from coworkers on different teams within our department.

UI/Front End Developer

247Meeting

📅 November 2017 - May 2019

📍 Dublin

- Fully re-designed the Conference Call Scheduler(built using ASP .Net, JavaScript & Bootstrap) making it scalable, responsive and accessible so as to give users a more experience when booking a conference
- Created a windows service to automate IOS push notifications using Node.js in conjunction with Google's Firebase Cloud Messaging service(FCM).
- Updated the existing IOS app (built using Objective C) to allow users to schedule meetings
- Full update of the existing web conference console(built using ASP .Net, JavaScript & Bootstrap) to allow users to monitor and control their conference call in real-time.
- Integrated feature requests using the Scrum method as well as maintaining existing products.
- Developed a Node.js script that calls a stored procedure and updates our client list on Intercom via their api to aid our marketing team.

Web Developer

Bubble Digital

 September 2015 - November 2017  Dublin

- Designed, developed, and maintained of a large range of websites for clients in various business sectors using the CMS WordPress.
- Customization of both WordPress and non WordPress websites using Front-End languages such as JavaScript and jQuery.
- Daily contact with clients throughout the planning, design and development stages of a website build.
- Development of HTML ezine's which are optimised for all email clients.
- Heavy Cross-browser testing using a variety of open source virtualization technologies.
- Developed strong working relationships with clients from industries ranging from financial sectors, FMCG, charities and online retailers.
- Trained clients in the use of Wordpress both on-site and off-site along with continuous after service support.

Technical Intern

Teamwork.com

 April 2014 - August 2014  Cork

- Set up a series of virtual machines on a development server so that new updates and bug fixes could be tested on different versions of IE prior to a production deployment.
- Researched different open source CI/CD methods which aided in the automation of pre deploy testing.
